Please find below and/or attached an Office communication concerning this application or proceeding.

The time period for reply, if any, is set in the attached communication.

Office Action Summary	Application No.	Applicant(s)	
	10/630,589	STICKLER ET AL.	
	Examiner	Art Unit	
	IGOR BORISOV	3628	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

1) Responsive to communication(s) filed on 09/28/2009.

2a) This action is **FINAL**. 2b) This action is non-final.

3) Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

4) Claim(s) 1-42,45-58,61-64,80-89 and 92-96 is/are pending in the application.

4a) Of the above claim(s) 1-32, 48, 64, 80, 95 and 96 is/are withdrawn from consideration.

5) Claim(s) _____ is/are allowed.

6) Claim(s) 33-42,45-47,49-58,61-63,81-89 and 92-94 is/are rejected.

7) Claim(s) _____ is/are objected to.

8) Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

9) The specification is objected to by the Examiner.

10) The drawing(s) filed on _____ is/are: a) accepted or b) objected to by the Examiner.

Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).

Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).

11) The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

12) Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).

a) All b) Some * c) None of:

1. Certified copies of the priority documents have been received.
2. Certified copies of the priority documents have been received in Application No. _____.
3. Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

Attachment(s)

1) <input checked="" type="checkbox"/> Notice of References Cited (PTO-892)	4) <input type="checkbox"/> Interview Summary (PTO-413)

DETAILED ACTION

Response to Amendment

Amendment received on 09/28/2009 is acknowledged and entered. Claims 1-32, 48, 64, 80, 95 and 96 have been withdrawn from consideration. Claims 43-44, 59-60, 65-79, 90-91 have been canceled. Claim 33 has been amended. Currently, claims 1-42, 45-58, 61-64, 80-89, 92-96 are pending in the application.

Claim Rejections - 35 USC § 101

35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

Claims 33-42 and 45-47 are rejected under 35 U.S.C. 101 because the claimed invention is directed to non-statutory subject matter.

A claimed process is eligible for patent protection under 35 U.S.C. § 101 if:

"(1) it is tied to a particular machine or apparatus, or (2) it transforms a particular article into a different state or thing. See Benson, 409 U.S. at 70 ('Transformation and reduction of an article 'to a different state or thing' is the clue to the patentability of a process claim that does not include particular machines.');

Diehr, 450 U.S. at 192 (holding that use of mathematical formula in process 'transforming or reducing an article to a different state or thing' constitutes patent-eligible subject matter); see also Flook, 437 U.S. at 589 n.9 ('An argument can be made [that the Supreme] Court has only recognized a process as within the statutory definition when it either was tied to a particular apparatus or operated to change materials to a 'different state or thing' '); Cochrane v. Deener, 94 U.S. 780, 788 (1876) ('A process is...an act, or a series of acts, performed upon the subject-matter to be transformed and reduced to a different state or thing.').⁷ A claimed process involving a fundamental principle that uses a particular machine or apparatus would not pre-empt uses of the principle that do not also use the specified machine or apparatus in the manner claimed. And a claimed process that transforms a particular article to a specified different state or thing by applying a fundamental principle would not pre-empt the use of the principle to transform any other article, to transform the same article but in a manner not covered by the claim, or to do anything other than transform the specified article." (*In re Bilski*, 88 USPQ2d 1385, 1391 (Fed. Cir. 2008))

Also noted in *Bilski* is the statement, “Process claim that recites fundamental principle, and that otherwise fails ‘machine-or-transformation’ test for whether such claim is drawn to patentable subject matter under 35 U.S.C. §101, is not rendered patent eligible by mere field-of-use limitations; another corollary to machine-or-transformation test is that recitation of specific machine or particular transformation of specific article does not transform unpatentable principle into patentable process if recited machine or transformation constitutes mere ‘insignificant post-solution activity.’” (*In re Bilski*, 88 USPQ2d 1385, 1385 (Fed. Cir. 2008)) Examples of insignificant post-solution activity include data gathering and outputting. Furthermore, the machine or transformation must impose meaningful limits on the scope of the method claims in order to pass the machine-or-transformation test. Please refer to the USPTO’s “Guidance for Examining Process Claims in view of *In re Bilski*” memorandum dated January 7, 2009,

http://www.uspto.gov/web/offices/pac/dapp/opla/documents/bilski_guidance_memo.pdf .

It is also noted that the mere recitation of a machine in the preamble in a manner such that the machine fails to patentably limit the scope of the claim does not make the claim statutory under 35 U.S.C. § 101, as seen in the Board of Patent Appeals Informative Opinion *Ex parte Langemyr et al.* (Appeal 2008-1495),
<http://www.uspto.gov/web/offices/dcom/bpai/its/fd081495.pdf> .

Claims 33-42 and 45-47 are not tied to a particular machine or apparatus nor do they transform a particular article into a different state or thing. The phrase “utilizing a computer” could be understood as merely using the computer as a display or a data storage. Accordingly, claims 33-42 and 45-47 fail the machine-or-transformation test, and, therefore, are non-statutory under § 101.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

1.

Claims 33-42, 45-47, 49-58, 61-63, 81-89, and 92-94 are rejected under 35 U.S.C. 103(a) as being unpatentable over Kara (US 6,233,568 B1) in view of Manduley et al. (US 5,324,893) further in view of Sansone et al. (US 5,019,991) and further in view of Official Notice as evidenced by Lidow (US 6,889,197).

Kara teaches a method, system and computer-readable medium having computer-readable instructions embedded therein for causing a computer to implement said method for receiving payment for postage for a parcel, comprising:

Claims 33, 49, and 81,
receiving from the customer mailing information for a parcel, the mailing information comprising customer-determined attributes of the parcel (Figs. 7-8A; C. 5, L. 60-67; C. 19, L. 55-65; C. 20, L. 62-67);
calculating a first postage value based on the customer-determined attributes (C. 5, L. 43-52; C. 9, L. 36-42);
transmitting data to the customer to permit printing by the customer of a mailing label for the parcel, the mailing label including an indication of the first postage value (P. 6, L. 1-2; C. 20, L. 1-3);

charging a customer account for the first postage value (C. 6, L. 12-21; C. 22, L. 13-19).

Kara does not specifically teach:

that said attributes comprising at least one of height, length, and thickness of the parcel;

determining attributes of the parcel by the delivery system operator;

calculating a second postage value for the parcel based on the operator-determined attributes; and

transmitting a postage payment adjustment amount to the customer account based on a comparison between the first and second postage values.

Manduley et al. teaches a method and system for verifying postage amount, wherein the actual/proper postage due is compared with the amount submitted by a sender (C. 4, L. 58-60). In operation, the geometrical dimensions of the individual mailpieces are obtained and compared with operator inputted dimensions of a sample of the mailpieces batch, the proper postage rate is computed and compared to the amount submitted by a sender, and a postage payment adjustment amount is transmitted to the customer account based on a comparison between the first and second postage values (C. 5, L. 53 - C. 6, L. 8; C. 6, L. 23-35), wherein necessary additional postage levied in the event the discrepancy exceeds a specified value (C. 6, L. 33-34) indicates “requesting additional payment when the second postage value is greater than the first postage value”.

It would have been obvious to one having ordinary skill in the art at the time the invention was made to modify Kara to include transmitting a postage payment adjustment amount to the customer account based on a comparison between the first and second postage values, as disclosed in Manduley et al., because it would advantageously allow to avoid returning short paid mail to the sender where more postage is required.

It would have been obvious to one having ordinary skill in the art at the time the invention was made to modify Kara and Manduley to include transmitting a postage payment adjustment amount to the customer account based on a comparison between

the first and second postage values, as disclosed in Manduley et al., because it would advantageously allow to avoid returning short paid mail to the sender where more postage is required.

It would have been obvious to one having ordinary skill in the art at the time the invention was made to modify Kara and Manduley to include that said attributes comprising at least one of height, length, and thickness of the parcel, because it would advantageously allow to facilitate processing batches of mailpieces with enhanced accuracy by relying on important attribute of the sample taken (Manduley et al., C. 5, L. 34-52). And it would have been obvious to one having ordinary skill in the art at the time the invention was made to modify Kara and Manduley to include determining attributes of the parcel by the delivery system operator; calculating a second postage value for the parcel based on the operator-determined attributes; and transmitting a postage payment adjustment amount to the customer account based on a comparison between the first and second postage values, as disclosed in Manduley et al., because it would advantageously allow to avoid returning short paid mail to the sender where more postage is required.

Sansone et al. (Sansone) teaches a method and system for verifying postage amount, wherein the actual/proper postage due is compared with the amount submitted by a sender, and if the postage amount exceeds the determined value, the sender account is debited to account for the discrepancy (C. 4, L. 5-15; C. 5, L. 15-22). Furthermore, Official Notice is taken that it is old and well known to credit customer's account in the event of overpayment. For example, Lidow discloses crediting a customer's account in the event of an overpayment (C. 24, L. 49-59):

The account of the customer who sent in payment 298 is reviewed for any other outstanding invoices (credit or debit balances) and payment 298 is applied to that customer's account. Finally, at 306, supply chain server 74 determines whether customer 72 made a full payment or overpaid for a given invoice 296. If there was no problem with payment 298, the invoice routine ends. Otherwise, error routine 308 is implemented where either a collection process is initiated based on the customer's past history or a credit is applied to the customer's account in the event of an overpayment.

Therefore, It would have been *prima facie* obvious to one having ordinary skill in the art at the time the invention was made to modify the combination of Kara and Manduley to include debiting customer account if the postage amount is less than the determined value, as disclosed in Sansone, and crediting customer account if the postage amount required exceeds the determined value, because it would advantageously allow to avoid returning mail to the customer when the customer's account has to be adjusted, as specifically stated in Sansone (C. 2, L. 33-35).

Claims 34, 35, 50, 51, 82 and 83. Kara discloses that the mailing information is received from the customer over a network (Fig. 1A).

Claims 34, 35, 50, 51, 82 and 83. Ramsden discloses that the mailing information is received from the customer over a network (the Internet) (Fig. 1A).

Claims 36, 52, 84. Kara discloses that the customer-determined attributes include at least one of height, length, weight, thickness, and weight of the parcel (Fig. 8).

Claims 37, 53, and 85. Kara discloses that the mailing information comprises at least one of return address information, destination address information, and payment information (Fig. 8).

Claims 38, 39, 54, and 86. Kara discloses that the mailing information comprises at least one of return address information, destination address information, and payment information (Fig. 8).

Claim 40, 56, 87. Kara discloses that the customer account is a credit card account (C. 31, L. 44).

Claims 41, 57, and 88. Kara discloses that the mailing label further comprises a unique identification code for the parcel (Fig. 3B; C. 9, L. 40-43).

Claims 42, 45-47, 55, 58, 61-63, 89, 92-94, same reasoning as applied to independent claims.

2.

Claims 33-42, 45-47, 49-58, 61-63, 81-89, and 92-94 are rejected under 35 U.S.C. 103(a) as being unpatentable over Ramsden et al. (US 6,105,014) in view of Manduley et al. (US 5,324,893) further in view of Sansone et al. (US 5,019,991) and further in view of Official Notice as evidenced by Lidow (US 6,889,197).

Ramsden et al. (Ramsden) teaches a method, system and computer-readable medium having computer-readable instructions embedded therein for causing a computer to implement said method for receiving payment for postage for a parcel, comprising:

Claims 33, 49, and 81,

receiving from the customer mailing information for a parcel, the mailing information comprising customer-determined attributes of the parcel, said attributes comprising at least one of height, length, and thickness of the parcel (manual input by the customer including the dimensions of the parcel) (C. 20, L. 18-19);

calculating a first postage value based on the customer-determined attributes (C. 20, L. 65-67);

transmitting data to the customer to permit printing by the customer of a mailing label for the parcel, the mailing label including an indication of the first postage value (C. 21, L. 15-35);

charging a customer account for the first postage value (C. 19, L. 17-38; C. 22, L. 43-62);

determining attributes of the parcel comprising at least one of height, length, and thickness of the parcel by the delivery system operator (service personnel C. 22, L. 24-27) after the parcel is received by the delivery system operator for delivery (C. 21, L. 39-54).

Ramsden does not specifically teach: transmitting a postage payment adjustment amount to the customer account based on a comparison between the first and second postage values, wherein transmitting the postage payment adjustment amount further comprises:

requesting additional payment when the second postage value is greater than the first postage value, and generating a credit when the second postage value is less than the first postage value.

Manduley et al. teaches a method and system for verifying postage amount, wherein the actual/proper postage due is compared with the amount submitted by a sender (C. 4, L. 58-60). In operation, the geometrical dimensions of the individual mailpieces are obtained and compared with operator inputted dimensions of a sample of the mailpieces batch, the proper postage rate is computed and compared to the amount submitted by a sender, and a postage payment adjustment amount is transmitted to the customer account based on a comparison between the first and second postage values (C. 5, L. 53 - C. 6, L. 8; C. 6, L. 23-35), wherein necessary additional postage levied in the event the discrepancy exceeds a specified value (C. 6, L. 33-34) indicates “requesting additional payment when the second postage value is greater than the first postage value”.

It would have been obvious to one having ordinary skill in the art at the time the invention was made to modify Ramsden to include transmitting a postage payment adjustment amount to the customer account based on a comparison between the first and second postage values, as disclosed in Manduley et al., because it would advantageously allow to avoid returning short paid mail to the sender where more postage is required.

Sansone et al. (Sansone) teaches a method and system for verifying postage amount, wherein the actual/proper postage due is compared with the amount submitted by a sender, and if the postage amount exceeds the determined value, the sender account is debited to account for the discrepancy (C. 4, L. 5-15; C. 5, L. 15-22).

Furthermore, Official Notice is taken that it is old and well known to credit customer's account in the event of overpayment. For example, Lidow discloses crediting a customer's account in the event of an overpayment (C. 24, L. 49-59):

The account of the customer who sent in payment 298 is reviewed for any other outstanding invoices (credit or debit balances) and payment 298 is applied to that customer's account. Finally, at 306, supply chain server 74 determines whether customer 72 made a full payment or overpaid for a given invoice 296. If there was no problem with payment 298, the invoice routine ends. Otherwise, error routine 308 is implemented where either a collection process is initiated based on the customer's past history or a credit is applied to the customer's account in the event of an overpayment.

Therefore, It would have been *prima facie* obvious to one having ordinary skill in the art at the time the invention was made to modify the combination of Ramsden and Manduley to include debiting customer account if the postage amount is less than the determined value, as disclosed in Sansone, and crediting customer account if the postage amount required exceeds the determined value, because it would advantageously allow to avoid returning mail to the customer when the customer's account has to be adjusted, as specifically stated in Sansone (C. 2, L. 33-35).

Claims 34, 50, 82 Ramsden discloses said computer-implemented method and system wherein the mailing information is received from the customer via computer, thereby suggesting a network (Figs. 11, 12, 15A-15D).

Claims 35, 51, and 83. Ramsden discloses all the limitations of claims 35, 51, 67 and 83, including receiving the mailing information from the customer via the network, except that said information is received over the Internet. Official Notice is taken that the use of the Internet for receiving information is old and well known. The motivation to

modify Ramsden to include the use of the Internet for receiving information would be to advantageously arrange the system in a distributed fashion, and presenting at the customer display guiding information which can be controlled from the central location, and promotional information which can be obtained from various remote sources (Ramsden, C. 19, L. 5-15)

Claims 36, 52, 84. Ramsden discloses that the customer-determined attributes include weight of the parcel (Fig. 8).

Claims 37, 53, and 85. Ramsden discloses that the mailing information comprises at least one of return address information, destination address information, and payment information.

Claims 38, 39, 54, and 86. Ramsden discloses that the mailing information comprises at least one of return address information, destination address information, and payment information.

Claim 40, 56, 87. Ramsden discloses that the customer account is a credit card account (C. 15, L. 37; C. 19, L. 17-21).

Claims 41, 57, and 88. Ramsden discloses that the mailing label further comprises a unique identification code for the parcel (bar-code) (C. 21, L. 22-29).

Claims 42, 45-47, 55, 58, 61-63, 89, 92-94, same reasoning as applied to independent claims.

Response to Arguments

Applicant's arguments filed 09/28/2009 have been fully considered but they are not persuasive.

Applicant argues that "it is not old and well known to credit a *postal* customer's account in the event of an overpayment where a customer has determined postage value and that value is later checked by a postal service, as herein claimed".

In response to this argument it is noted that Official Notice is taken that the concept of crediting a customer account in the event of overpayment is old and well known. For example, Lidow discloses crediting a customer's account in the event of an overpayment (C. 24, L. 49-59):

The account of the customer who sent in payment 298 is reviewed for any other outstanding invoices (credit or debit balances) and payment 298 is applied to that customer's account. Finally, at 306, supply chain server 74 determines whether customer 72 made a full payment or overpaid for a given invoice 296. If there was no problem with payment 298, the invoice routine ends. Otherwise, error routine 308 is implemented where either a collection process is initiated based on the customer's past history or a credit is applied to the customer's account in the event of an overpayment.

To this end it is further noted that the concept of crediting a customer account in the event of overpayment is not really depend on the type of services rendered or product purchased. Therefore, modification of the combination of Kara, Manduley and Sansone to include "crediting customer account if the postage amount required exceeds the determined value is proper".

The remaining applicant's arguments essentially repeat the arguments presented above; therefore, the responses presented by the examiner above are equally applicable to the remaining applicant's arguments.

Conclusion

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Igor Borissov whose telephone number is 571-272-6801. If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, John W. Hayes can be reached on 571-272-6708. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status

information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
